SUMMARY

AI Engineer with 2 years at Tata Consultancy Services building production RAG systems, LLM pipelines and knowledge-graph search. Strong in hybrid retrieval (vector + graph), FastAPI microservices and secure, CI/CD-deployed APIs. Learning Japanese (JLPT N5 in progress) and keen to work with Japan-linked engineering teams.

SKILLS

AI/ML	Generative AI, RAG, LangChain, Prompt Engineering, Embeddings, ChromaDB, FAISS
Languages	Python, Java, SQL, JavaScrip
Backend	FastAPI, Spring Boot, Django, REST APIs, Microservice
Data and tools	Git, GitHub, GitLab CI/CD, PostgreSQL, MySQL
Languages(human)	English (professional), Hindi, Marathi, Japanese (beginner, N5 in progress)

EXPERIENCE

Software Engineer Jan, 2025 - Present

Tata Consultancy Services (TCS) *Pune, India*

- Built and deployed an enterprise RAG pipeline with LangChain, ChromaDB and Azure OpenAI, replacing a long manual workflow with real-time responses.
- Designed end-to-end retrieval pipeline including: intelligent document chunking (recursive + token-based strategies), embedding generation using transformer-based models and FAISS/ChromaDB indexing for top-k semantic retrieval
- Implemented context-aware LLM orchestration that injects retrieved chunks into prompts to produce grounded, citation-backed answers and reduce hallucinations.
- Built a hybrid retrieval system (vector + Neo4j knowledge graph) that improved retrieval relevance by 45% through graph traversal combined with semantic search.
- Developed FastAPI microservices for the query, retrieval and generation flow, secured with JWT/OAuth2
- Set up GitLab CI/CD pipelines for zero-downtime releases and 30% faster iteration cycles

Java Developer Internship Aug, 2022 - Sep, 2022

R3 Systems India Private Limited *Nashik, India*

- Developed high-performance web application using JSP, Servlets, and MySQL supporting 1,000+ concurrent users.
- Optimized backend performance by 30% through efficient multithreading and query optimization.

PROJECTS

Enterprise RAG System (LangChain, FAISS, HuggingFace, Streamlit)

- Built complete RAG pipeline: Data ingestion → chunking → embedding → vector indexing → retrieval → LLM response generation
- Implemented advanced chunking strategies: recursive text splitting token-aware chunking with overlap to preserve semantic continuity
- Generated embeddings using SentenceTransformers and stored vectors in FAISS for high-speed similarity search.
- Integrated LLM (OpenAI/Azure OpenAI) to generate answers grounded in retrieved context, improving factual accuracy and reducing hallucinations.
- Engineered fallback handling (scraping failures, missing env configs) ensuring $\tilde{9}9\%$ system uptime.

Knowledge Graph RAG Chatbot (Neo4j, LangChain)

- Developed hybrid graph + vector retrieval system integrating Neo4j and LangChain for structured + unstructured data querying.
- Improved contextual answer accuracy by 60% with graph-enhanced retrieval.
- APIs secured with OAuth2/JWT and deployed through CI/CD.

Candidate Assessment Tool(Spring Boot)

- Built scalable Spring Boot backend (MVC architecture) reducing development effort by 30%.
- Automated candidate evaluation workflows, improving HR efficiency by 25%.

EDUCATION

B. Tech in Computer Engineering, R. C. Patel Institute of Technology, Shirpur Jul, 2020 - Jul, 2024

CGPA: 8.05/10
